Is your Business Ready to Respond to a DDoS Attack?

DDoS Attacks do not Have Boundaries. Your DDoS Protection Shouldn't Either.

Distributed Denial-of-Service (DDoS) attacks are simple, yet effective in overwhelming your network with large amounts of malicious traffic. They have become a popular attack method due to the ease to orchestrate and the difficulty to prevent and trace.

Now is the time to consider ImOn's DDoS protection solutions. The costs to prevent an attack are considerably lower than the costs to restore and recover after an attack. ImOn offers a variety of packages that can help detect, identify and mitigate attacks, guarding companies of all sizes from DDoS attacks that can cripple networks and systems.

Make sure your business is protected with ImOn DDoS protection services.

OVER $2 Million

A DDoS attack can **cost up to $120,000 for a small business and more than $2 million** for an enterprise organization. That equates to a lot of lost revenue and assets, along with brand damage to your business. *

39%

From 2018 to 2019 the frequency of **DDoS attacks increased by 39%****

1Gbps

This threat does not discriminate with the average size of an attack at 1Gbps being able to **take most organizations completely offline.****

x2

By 2023, **DDoS attacks will double** to 15.4 million.**
