

Unified Communications as a Service (UCaaS) — White Paper

Choosing a Phone System That Will Increase Productivity, Improve Efficiency and Reduce Costs

Abstract/Summary

Unified Communications as a Service (UCaaS) provides several benefits to companies of all sizes. Business can realize both initial and long-term savings with Voice over IP (VoIP), and with UCaaS, capital investment is minimal.

Unified Communications as a Service (UCaaS) is also easier and less expensive to manage and support, which means there is less reliance on IT teams or outside contractors for moves, adds, and changes.

Businesses can take advantage of rich calling and collaboration features in their UCaaS solution. Call routing features can improve handling of inbound calls to a call center; instant message and presence features help to improve employee productivity and mitigate the challenges of a remote staff.

Introduction

Your business has many priorities. With so many things to focus on, you may not be thinking about your phone system – it does the job, so why change it? But what if your phone system was able to help your employees be more reachable? Or it could help make your employees more productive? Or provide a means to respond more quickly to your customers?

If these outcomes are important to you, then switching to UCaaS should be on your priority list. Technologies such as Voice over IP (VoIP), especially when provided through a “cloud” based service deliver an impressive array of capabilities, and at a price point that fits all budgets.

A legacy phone system, with its outdated technology is very expensive to maintain, is difficult to scale, and does not deliver modern features that your business needs to succeed.

Are you moving or adding a new location?

Switching to UCaaS when moving offices or expanding locations will not only save your business time and costs but will give you the opportunity to take advantage of useful features you never had with your old system. Moving can provide challenges, it is difficult and expensive to move an old phone system to a new location. The cost of uninstalling it, transporting, and reinstalling it can represent anywhere from 20-40 percent of the cost of an entirely new system.

Adding an additional office location is another reason to consider switching to UCaaS. Transferring the entire company to UCaaS in this situation will not only be easier to manage but will only nominally increase the time and effort it takes when compared to what it would take to maintain and monitor two separate phone systems (or more, depending on how many office locations you have).

Can your current phone systems grow with your business?

Most legacy premises phone systems have a maximum number of phones they can support before having to purchase additional equipment. With UCaaS, simply connect your employees to an IP network, and they can take advantage of the benefits of your UCaaS solution.

Increased customers can also tax your legacy phone system. If you don't have enough incoming and outgoing phone lines, customers will get a busy signal, which leads to hang-ups, and potentially ends in lost revenue. A UCaaS system can be set up to have a potentially limitless number of lines that are activated when all real phone lines are busy. These lines can play music on hold or have a custom Interactive Voice Response (IVR) to direct callers to the right person.

Enhance Productivity

If you have an outdated phone system, you are missing out on the productivity enhancing features that are available with UCaaS. Below are just a few of these capabilities:

- Call Reporting - UCaaS systems provide impressive call reports and stats, as well as the ability to track individual phone calls – features that are extremely valuable to a business call center or inside sales team.
- Mobility and softphone applications
- Call queues, such as Automatic Call Distribution (ACD)
- Instant Messaging and Presence

What is UCaaS?

UCaaS makes all the features and capabilities of a best-in-class phone system available to you without the need for a big capital purchase. With UCaaS, the service provider hosts and manages the phone system in their network. As a business, you do not have to worry about the expense, maintenance, or other downsides to purchasing a physical phone system. Instead of that big up-front investment, you pay only for what you need.

With UCaaS, companies can expect:

- **Low or No Capital Costs** – Unlike premise-based systems, the “brains” of UCaaS reside in the cloud, so there is very little equipment to purchase, resulting in limited up-front costs.

- **Predictable Operating Expense** – Monthly voice and data charges are usually calculated on a per user basis. If you have 10 employees each with a telephone on their desk, your monthly operating cost will be 10 times a set fee. If you add people, you'll know exactly how your costs will increase.
- **No 3rd-Party Maintenance Expenses** – Because the service provider owns the equipment, they are responsible of all the costs associated with maintenance.
- **Business Continuity** – Since the phone system resides in a secure facility with safeguards like back-up power and equipment, events at your location (such as a power outage) will not impact your phone system. You can simply and quickly configure the service to have the calls routed to an alternate number (such as another location, home, or mobile device).
- **No Obsolescence** – The service provider hosting the system will routinely upgrade the service so that new enhancements are delivered on an ongoing basis.
- **Feature-Rich Communications** – Multiple features are available for improved call handling and routing allowing for better mobility and productivity.

Benefits of Cloud Voice from ImOn Communications

By investing in Cloud Voice, businesses can reduce expenses, improve employee productivity, increase flexibility, and better serve customers:

Month-over-Month Cost Savings

- Cloud Voice reduces overall cost-of-ownership, because there's minimal phone system equipment to buy or lease.

Less Reliance on IT

Cloud Voice is easier and cheaper to manage and support, in part because Cloud Voice and its features reside in the cloud.

- Cloud Voice eliminates the need to maintain hardware.
- Easy moves, adds, and changes all can be done via simple software changes.
- Users can manage features and call routing themselves via an easy-to-use web interface.

Improve Productivity

- Visual Voicemail – Easily check voice and video messages from a single message center called MaX UC. Voice messages can even be translated into text so you can read them without dialing in to retrieve them. Listen, delete, or respond at the touch of a button.
- Contact Management
 - Send instant messages to other people in your corporate directory who are using the same service.
 - Presence provides availability status of contacts using both calendar and phone status.
 - Integrate contacts on any device.
 - Search, call, and edit any of your contacts effortlessly and keep them synchronized.

Mobility

- Seamlessly move calls from device to device, or from cellular to Wi-Fi, even in the middle of a call.
- Employees can work from anywhere and use all the features they value so much when you're in the office, and all connected to their office phone number.
- Quickly change call routing using an easy-to-use web portal.

Summary

ImOn Cloud Voice is truly the last phone system you'll ever need. It delivers best-in-class capabilities at a price that fits all budgets. As described earlier, a Cloud Voice solution has a lot of advantages. In addition to those, here are a few others:

Cost savings - Cloud Voice includes everything you need to support the voice needs of your business.

There are no hidden costs – Simply pay a flat rate per employee per month and that's it. As your business expands, you can simply add new users to your account.

Big business features – Cloud Voice provides you all the features you need and then some. If you're on an older system today, you'll be thrilled with the functionality that's available with Cloud Voice. Included are the features you'd expect – call transfer, voicemail, call forwarding, and the like. However, what really makes Cloud Voice exciting are capabilities such as:

Mobility

ImOn's mobility package, MaX UC, allows you to integrate your mobile device, tablet, or laptop into Cloud Voice. MaX UC includes downloadable clients for:

- Windows based laptops/desktop computers
- Android-based mobile devices and tablets
- Apple devices and tablets (iPhone, iPad, MacBook)

Cloud Voice integrates your mobile device with enterprise phone functions and enables you to send and receive calls from any connected device. You can also Instant Message, Video Chat, integrate with Microsoft Outlook, and move active calls between devices.

Communication and Productivity

Cloud Voice provides fully integrated collaboration and messaging features for seamless communication and productivity.

- Instant Messaging and Presence
- Integrated collaboration capabilities for Integrated collaboration capabilities with both Desktop and Mobile Applications for MaX UC
- HD Voice

Quick and Easy Customization

An easy to use web portal enables you and your employees to easily customize their phone system experience to suit the way they do business.

Have an employee that's out of the office a lot of the day? With the click of a mouse, a user can take advantage of CloudVoice powerful remote office capabilities to have their desk phone and mobile phone ring simultaneously or use the mobile client to receive calls anywhere.

Want to distribute inbound sales calls to a group of employees? Again, a click of a mouse in the web portal lets you manage a hunt group that can ring your sales team's phones simultaneously, in sequence, or in a specific pattern.

Customer Service

ImOn is located where you are. Should there ever be a question or problem, our trained staff will solve it to your satisfaction – quickly. Compare that to other providers that serve customers with an 800 number in another state or even another country and you'll understand why local is better.

Voice Quality and Security

Since CloudVoice is a service that's fully managed, we ensure a superior experience. This is not a product that uses the commercial internet to route voice calls. With CloudVoice, end-to-end quality and security are assured. All calls are routed over our managed network to give your calls highest quality.

Conclusion

There are a lot of options out there when looking at a phone system. It may seem like the status quo – no change – is the safest bet. However, the pace of technology has now made possible an impressive array of capabilities available to small business that was previously only available to larger ones. Now might be the right time to evaluate your needs and see if new capabilities might help your business be more productive. You might find you can make a big jump forward while spending pretty much what you're spending today or even saving money.

With CloudVoice, ImOn is delivering a best-in-class phone system with no up-front costs that allows you to buy only what you need. We take care of all the details – phones, equipment, installation, training, and ongoing service – so you can focus on your business. Best of all: we're local – we're available around the clock to help solve any problems you might have.
